

DNL 785

DESCRIPTION

DarNlok 785 is a reformulated version of Dar-Cole Products' original DNL 902. DNL 785 is a water reducing admixture developed for on-site continuous type mixers. DNL 785 is a special blend of DNL 485 and DWR 385. DNL 785 has various uses for all types of mixers because of its rapid integrating characteristics and the ability to be used in the water supply system. DNL 785 decreases water/cement ratios while increasing the quality of the cement, improving slump loss, splashing, shrinkage, segregation, and stabilizing the volume. DNL 785 has many of the same characteristics of the previous DNL 902; however, DNL 785 increases flowability, pumpability, and workability while reducing more water. DNL 785 is also applicable with pervious concrete applications.

ADVANTAGE

Increases bonding, flexural, and compressive strength. Workability, placement and finishing easier. Locks in air and water. Enhances air entrainment by 1 to 1-1/2% + -. Stabilizes the volume. Accelerates the finishing time. Enhances Color.

PHYSICAL DATA

Neutral in solution. Non-flammable. Non-toxic. Non-carcinogenic. Brown, medium viscosity Hygroscopic. Non-corrosive.

APPLICATION

Add to mixing water 1 to 2 gallons per 100 gallons of water. Add 6 to 12 oz per bag of cement.

PACKAGING

Available in 30 or 55 gallon drums and is delivered by tanker trucks for set-up customers purchasing bulk amount 300, 500, 1000 (+) gallons. Must be dispersed separately but is compatible with most admixtures.

LIMITATIONS

- Freeze below 20 degrees Fahrenheit.
- Conforms to A.S.T.M. C-494 Type A.
